How do i replace my kindle battery

Let's tackle it together! Disclaimer: As with any repair, iMore can not be held responsible for any damage you may do to your device. It's also worth considering that opening up your device to perform any repair or modification can and will void your Apple warranty. If you don't feel comfortable opening your device, don't. With this specific repair, please take care not to puncture or bend the battery in any way as it could be a potential fire hazard. Use extreme care and caution when performing a repair on any device. What You need for a DIY battery swap We recommend using only quality and genuine parts from a reputable supplier like iFixYouri. They have the parts, tools, and all your other repair needs. Replacement battery 5-point security screwdriver Standard #000 Phillips screwdriver Spudger tool iSesamo Opening tool (not necessary but awesome for prying up cables and getting under adhesive) How to remove the back of your iPhone 4 First remove the bottom 2 dock connector screens in your iPhone 4. Use either your #00 screwdriver or the five point depending on whether or not your iPhone 4 has security screws in the dock connector. Almost all newer devices will have security screws. To remove the back simply slide the back upwards and lift it off gently. Set the back and 2 dock connector screws aside. How to remove the old battery of your iPhone 4 To remove the old battery you'll need to remove the #00 screw holding the battery clip in place. Remove this screw located to the bottom left of the battery. The metal clip on the battery is what clips the battery to the logic board. You'll need to pop this clip up with your plastic pry tool. Simply stick the end of your pry tool underneath the clip and gently pull upwards until it unfastens from the logic board. To remove the battery, I do not recommend using the plastic pull tab. There is quite a bit of adhesive underneath the battery and the tab will normally just rip off or you can bend the battery. Instead, run your pry tool along the right side of the battery and break the adhesive that way. Once the battery is free from the adhesive, you can pull the old battery out of the phone. There are no other connectors holding it in. As a side note, there is a tiny grounding clip that sits right where you unscrewed your battery from. Do NOT lose this clip. It grounds your cellular antenna. You will need to make sure it is in place before installing the new battery. How to install a new battery in your iPhone 4 Make sure your grounding clip is in place. It should be lined up with your #00 screw hole for your battery. It goes under your battery clip. Once your grounding clip is lined up you can snap your new battery in place. Just line up the clip on the battery to where it gets seated on the logic board and snap it down. You should hear it click into place. Set the new battery in place and line it up. Replace the #00 screw that holds the battery and grounding clip in place. How to put the back cover back on your iPhone 4 Place your iPhone 4 back cover back on by lining up the clips and sliding it down into place. It should fall directly into the track. It should be easy to slide it into place. Put the two dock connector screws back in. And... done! That's it. You now have a new battery inside your iPhone 4! Have you done this repair yourself? Let us know how it went! There's more than one reason you might need a new iPhone battery. If it isn't lasting as long on a charge as it once did, it's randomly shutting down during times of intense use, or iOS is telling you the battery health isn't great, you should have the battery switched out to extend the phone's life and usefulness. Here's how to replace the iPhone's battery and restore power to your iPhone. Instructions in this article apply to the iPhone SE, 5, 6, 7, 8, X, XS, XR, and XS Max. On an iPhone 6 or later running iOS 11.3 or later you can check your battery's health and see its reported condition. If it has extensive wear, it will indicate a new battery is advisable. iPhones are not being slowed for malicious reasons, but simply to prolong the natural life of lithium-ion batteries and prevent sudden shutdowns. Open the iPhone's Settings. Scroll down and tap Battery. Tap Battery Health to display results. If you have any inclination your iPhone needs a new battery you can take it to Apple to have them replace it. For the entirety of 2018, the cost will be cheaper for most iPhones. You can get a new battery for an iPhone SE, iPhone 6, iPhone 6 Plus, iPhone 6s, iPhone 6s Plus, iPhone 7, iPhone 7 Plus, iPhone 8, iPhone 8 Plus, or iPhone X for \$29 with no AppleCare coverage until December 31st, 2018. To start the process of having Apple replace the iPhone battery, visit this Apple Support page, then select Start a battery replacement. You'll be prompted to log in with your Apple ID before following the localized instructions. The iPhone XS, XR, and XS Max can have their batteries replaced for a higher price point of \$69, and will be completely covered under warranty until late 2019. If you're covered by a warranty or have AppleCare+, a battery replacement is free for all phone models. If you're so inclined, you can replace the battery yourself, which usually takes anywhere from 30 minutes to 2 hours, based on your experience with the iPhone hardware. Apple has long used unique and specialized screws to prevent unauthorized access to its phones. These tiny internal screws don't change regularly but have over the years. iPhones use lithium-ion batteries, which are traditionally a unique size and shape for each phone. Despite largely staying the same physical shape for two years in a row, the internal components have shifted around over the years. When looking for instructions to follow be sure to read the comments and make sure the person or company has good ratings and reviews. If you're attempting to replace the battery yourself, there are some things you should know ahead of time. How to plan ahead for your DIY battery swap Create a static and clutter free tabletop to work with that provides at least 2 feet by 2 feet of space. Use a magnetic screw bowl or some other containers to place tiny screws after removal. Get the necessary specialized tools, as iPhones use proprietary screws. These will be called out in the instructions. Make sure to have a second device to keep text or video instructions visible. Have a pen and paper handy for making notes along the way. Give yourself plenty of time. The last thing you want to do is rush through this process and accidentally damage your iPhone. Once you're ready to replace your own battery, research the recommended tools and battery options for each phone individually, as they're all slightly unique. Apple has a long history of using specialized screws which need a specialized screwdriver. When looking up specific instructions, be sure to note the screwdriver and plastic pry tools you'll need. You can, of course, browse Amazon or eBay for low-cost options, but this is another potential risk with dealing with harmful and explosive batteries. Be safe and buy from a retailer you trust and skim the instructions entirely before diving in. iPhone Battery Replacement Steps Overview As you begin the iPhone battery replacement, these are the key areas you'll encounter. When removing the screen, be sure to apply enough force to break the seal loose. However, too much force could damage the clips or front camera connectors. The battery is secured with an adhesive to the case and will not fall out once the necessary screws have been removed. After inserting a new battery, it's critical to reassemble the parts in exactly the same reserve order as disassembly. Once the replacement is completed, plug the device in, power it back on and check all functions. Be sure to check the front and rear camera, headphone jack, speakers, Wi-Fi, and cellular connectivity to make sure all cables are properly seated. Thanks for letting us know! The Kindle is a wireless reading device, or e-reader, that lets you carry your entire library in a small package that weighs just over 10 ounces. There are more than 350,000 titles available for purchase that can be downloaded to your device in about a minute without the need for external computers or cables. The Kindle's battery life is long, except when the text-to-speech feature is used frequently, in which the device reads the book to you. The battery can be replaced in about five minutes. Remove the Kindle's back cover by gently pressing down both your thumbs near the cover's center while pushing it to the side. Gently pry the battery out of the opening with a fingernail. Pull the wiring connector off the battery. Do not dislodge or loosen the white square underneath the Kindle's battery. Make sure the new battery is the correct replacement by comparing it with the old battery. It should be the same size and have the same wiring connector. Push the connector on the battery's wiring harness into the Kindle's wiring connector. Gently push the battery into the opening. Slide the battery cover back into position until it snaps into place. The Kindle's battery should hold a charge as long as a week with the wireless function turned on, according to Amazon.com. If you turn the wireless function off, the charge should last as long as two weeks. Make sure you buy the right type of replacement battery for your Kindle. There are three versions of this device: the Kindle, the Kindle 2 and the Kindle DX.
