## Fision cable channel guide

If you are thinking about cutting the cord from traditional cable or satellite TV, you may be wondering how you can still watch your local channels. Thankfully, paying gobs of money for a cable subscription is not the only way to access your local ABC, CBS, NBC, FOX and PBS affiliates. In this article, I'll explore some cost-effective solutions for getting the local news, sports and network TV shows that you enjoy on your local channels: Option 1: Buy an Antenna If you live in an urban or suburban setting, the simplest method for maintaining access to your local channels may be the one-time purchase of an indoor antenna. Antennas are relatively cost-effective to add to your television and provide free access to local channels broadcasting in your area. But the quality of access to these channels is directly correlated to the power of your antenna and your distance from the towers of your local TV stations. If you live nearby, you may need an antenna that reaches only 30-50 miles. Mohu Leaf, which is one of the top-rated antennas brands for cord-cutters, offers a "metro" antenna for under \$20 through Amazon. It has a 25-mile range. If you live in a more rural setting (at least 100 miles from the towers for your local channels), you'll probably need a long-range antenna. Amazon offers an antenna from XFTREE touting a 200-mile reach for less than \$30. It had a 4.3-star rating after almost 1,300 reviews at the time of this writing. Aside the cost, your main concern in a rural area is quality reception. You'll have to worry about potential interruptions in your signal that could come from both the surrounding terrain and interfering signals from other towers. If you need help picking out your indoor antenna, money expert Clark Howard has you covered with this instructional video. Option 2: Subscribe to a Live TV Streaming Service If you're cutting the cord from traditional cable but still want to watch most of your favorite TV channels, you're likely considering a live TV streaming service. Many — but not all — of these services offer at least some of your local channels with your subscription. YouTube TV and Hulu + Live TV both tout access to some local channels included with their \$65 per month subscriptions. This isn't the cheapest solution in this article, but it may end up being the most effective. I searched my ZIP code on YouTube TV's site and found that it carries my local ABC, CBS, FOX, NBC and PBS channels and more. YouTube TV: Nashville Local Channels But not all live TV streaming services will be this thorough. Sling TV, which is a popular live TV streaming choice because of its \$35 monthly fee, offers access only to NBC and FOX affiliates in select markets. And value service Philo, which offers more than 60 channels for just \$20, does not carry local channels at all. Option 3: Get What You Need From Video Streaming Services This is a new and emerging option for accessing content from local channels. If you're not keen on buying an antenna or paying for one of the live TV streaming services, you may be able to get what you need from a video streaming service. ViacomCBS service Paramount+ (\$5.99 per month) and NBC's Peacock (\$4.99 per month) are two relatively new players in this field. And they both offer local channel content at a fraction of the cost of a live streaming subscription. Paramount+ includes a live stream of your local CBS affiliate as well as on-demand streams of CBS content. For many titles, such as 60 Minutes or NCIS, new content is often available for streaming within 24 hours of its live TV airing. Peacock offers on-demand streaming of NBC shows, such as Saturday Night Live, shortly after they air. It has a live streaming section for NBC content, but it's not the local channel. Hulu's on-demand service (\$5.99) also makes network TV content available for on-demand consumption shortly after broadcast airing. Option 4: Try Locast if You Live in a Supported Market Locast is a very cost-effective option for viewing local channels, but it's not available everywhere. This nonprofit operation takes the broadcast signals of local channels and streams them over the internet for free. But right now, it's available in only about 30+ television markets. Locast.org Approximately 51% of the United States population could take advantage of Locast, but, as you can see on the map above, there are some large gaps yet to be filled. And while Locast is free, you'll have to deal with frequent interruptions in the form of donation requests. So if you're using the service often enough, you may want to consider chipping in to avoid that headache. You can read more about the details on Locast in Team Clark's review of the service. Option 5: Try Freebie Services Such As Amazon News and NewsON If it's local news that you're after, you may be able to get by with some of the programming from emerging free streaming services. Amazon News is the latest of these to offer free news updates from local channels in 88 U.S. markets. To access this feature, you'll need the Amazon News app that is located on the Fire TV Streaming devices. Once you're on the app, you'll be able to choose from a menu of local channel newsfeeds. Typically, you're offered the channels that are closest to your location. In my case, I was able to get news and weather from my local CBS affiliate for free. Keep in mind that this is not actually a live stream of the channel's over-the-air broadcast. Instead, it's highlights and clips from newscasts and other local programming. If you're a Roku user, there is a similarly interesting option there called NewsON that touts access to more than 275 local news sources across the country. Option 6: Access Content via Individual Network Apps and Websites My final suggestion for accessing local channel content without cable is to simply go straight to the source on the internet. Here's a quick list of links for the network-level apps for your local channels: Many times you can watch free (but ad-supported) on-demand replays of your favorite shows from the networks. And your local network affiliates may have their own apps or websites that offer clips, streams, articles and highlights from locally-produced programming. So, in tandem with the national apps, you may be able to create a workable free content mix from your local channel without paying for anything. Final Thoughts There are several viable paths for cord cutting seeking local channels. For many people, the only way to fully recreate the local channel experience that you get from cable is to sign up for a live TV streaming service. However, the most cost-effective way to get this done is with an antenna or by streaming through Locast. These methods are possible only in select markets and don't offer the benefits of DVR or pausing live TV. If it's just the content that you're after and you don't care when or how you come by it, you may be able to save some money and stress by sticking to the freebie content offered on apps. More Clark.com Content You May Like: The role of cable is to carry an audio or video signal from one device to another. Cables carry signals between DVD players and TVs, stereo receivers and speakers, and computers and video projectors. Cables don't change the nature of the audio or video signal they carry. They don't convert or process signals in any way. That's the job of the devices on either end. The cable itself is just the messenger.Cables are made up of three basic parts: conductor, shielding and connector [source: Graves]. The conductor is the wire that actually carries the signal. One or more layers of shielding prevent the wire from acting as an antenna that picks up radio frequency interference (RFI) and electromagnetic interference (EMI) [source: Graves]. The connector is the plug at the end of the cable that connects to your device.Cables are important components of any home stereo or home theater setup. If you don't use the right cables for the right job then you could end up with subpar sound or picture quality. And if you use cables that are damaged or otherwise junky, you could really end up with a lousy experience. For audiophiles, using low-end cables with a \$5,000 plasma HDTV is like putting crappy tires on a Ferrari.Some audio/video experts argue that consumers should spend 20 percent of their total system cost on cables alone [source: Rushing]. The truth is that many cheaper cables offer a listening/viewing experience that most consumers could never tell from the really high-end cables [source: Rothman].To keep things simple, we're going to break down the overwhelming amount of cable types into three categories: audio-only, video-only and audio/video cables that carry both sound and picture. The channel for The CW network depends on multiple factors, such as the current city, state and cable provider. Channel listings can be found on The CW's official website. The CW Network was founded in 2006 as a joint venture between CBS Corporation and Warner Bros. Entertainment. The name is derived from the first letter of the two corporations that form it. An interesting aspect of The CW's programming schedule is that it is the only network that caters to women between the ages of 18 and 34. Among its list of shows are "America's Next Top Model," "Beauty and the Beast" and "The Vampire Diaries." The channel number for FX varies depending on what cable television operator you are using. To identify the channel number for FX used by your cable operator, access the Channel Finder tool on the FX Networks website. Type in your zip code, select the name of your cable operator from the resulting list of options and note the channel number that appears. The FX channel is available on cable systems across the country, including Comcast, Time Warner Cable, Cox Communications, Verizon, AT&T and many others. The channel is also carried by the two major satellite television operators in the United States, Dish and DirecTV. Comcast is one of America's largest cable TV providers, most recently ranked as 3rd largest in the nation (in numbers of subscribers) behind AT&T and Charter Communications. The media company offers a multitude of cable TV channels to customers based on varying cable TV packages. Cable TV Cable TV has been the warm comfort visual medium for Americans for over 20 years. Cable TV is made available to customers via a cable box that hooks up to a television set and provides a number of channels depending on the cable TV package chosen. Most of the major industry providers today offer more than just cable TV packages. More frequently, these media companies provide phone services, Internet service, cable TV, or a bundle of all of these services. Comcast Cable TV ServiceComcast currently offers (winter 2019) the following three cable TV packages under its InfinityX brand:BASIC CABLE (\$20/mo)-This basic cable package gives customers these basic channels below in this package, along with local cable access, government, and educational channels. ABCBYutvCBSCNBCC-SPANC-SPAN 2CWDDiscoveryEVIENE Live!FOXGalavisionHistoryHISNHSN2INSJewelry TV NBCCPBSQVCTravel ChannelTV LandEXTRA CABLE (\$60/mo)- This next cable channel package offers the main network channels and more than 125 cable channels, including ESPN, C-SPAN, and others.PREFERRED CABLE (\$80/mo)- Comcast's premium cable TV package is Preferred Cable, which offers the main network channels and more than 200 other cable channels, including niche interest channels like Food Network, Speed (cars) and more. Prices and available channels vary across the regions of the United States. Bundled PackagesComcast customers can also purchase bundled packages for phone, Internet, and cable service, all in a single payment. These bundled packages also offer Comcast's Xfinity on Demand streaming service, which allows customers to stream Xfinity titles onto a range of personal electronic devices. These bundled packages vary in price across the US, but here are the general details for the Chicago, IL market:Digital Starter TVDIGITAL STARTER TV: \$60/mo. for 1 year. Includes over 125 digital channels, such as The History Channel, Fox Sports, and MSBNC. This package also has the Xfinity on Demand service (movies/TV titles on demand) and Xfinity Streaming access on TV, phone, laptop, or tablet. X1 Starter Pro Double PlayX1 STARTER PRO DOUBLE PLAY: \$75/mo. for the first 24 months of a 2 yr. agreement. Includes more than 125 digital channels, and Internet access with speeds up to 500 mbps. Plus, free access to millions of wifi hotspots. Comcast GrowthCable companies have been faced with declining home cable TV subscriptions in recent years. Because of this, traditional cable TV operators have had to advance forward with mergers, acquisitions, or launching new streaming services, or risk being left behind. The recent growth in streaming companies like Netflix, Hulu, Disney+ and others helped motivate Comcast to purchase the UK's SKY TV for \$40 billion in 2018. In the deal, Comcast gains more subscribers, more content and more international reach.
