Avakin life mod apk for android.

(Image credit: Anadolu Agency / Getty Images) Be very careful about installing a WhatsApp mod on your Android phone — it may contain malware.Kaspersky reported in a blog post (opens in new tab) yesterday (Aug. 24) that a certain version of a WhatsApp mod called FMWhatsapp contains malware that itself downloads and installs even worse malware. This includes the notoriously difficult-to-remove xHelper Trojan.WhatsApp "mods" are auxiliary Android apps, mostly found outside the Google Play store, that modify how WhatsApp functions. FMWhatsApp, for example, offers to add custom themes, access other apps' emojis and app locking with a PIN, password or fingerprint."With this app, it is hard for users to recognize the potential threat because the mod application actually does what is proposed — it adds additional features," said Kaspersky expert Igor Golovin. How to avoid infectionFMWhatsApp is not in the Google Play Store at all, and only version 16.80.0 is known to be infected, so it should be pretty easy to avoid as long as you don't install apps from third-party app stores. (You have to grant apps special permissions to do so.)Many of the best Android antivirus apps also catch the rogue version of FMWhatsapp as it's being downloaded, so they will give you added protection from it and other forms of Android malware.What's going on hereFMWhatsapp 16.80.0 contains the Triada Trojan, a strain of mobile malware that's been around since 2017. In its current form, Triada is a "downloader" whose main purpose is to establish a backdoor through which other malware can be downloaded and installed.Along with xHelper, Triada in this instance installs several other malware strains that display ads, run "hidden" ads to commit ad fraud, secretly sign up the phone users to paid subscriptions, harvest phone information and install even more Android malware."FMWhatsapp users grant the app permission to read their SMS messages," Golovin points out on the Kaspersky SecureList blog (opens in new tab). "The Trojan and all the further malicious modules it loads also gain access to them. This allows attackers to automatically sign the victim up for premium subscriptions, even if a confirmation code is required to complete the process."We don't recommend using unofficial modifications of apps, especially WhatsApp mods," the Kaspersky report says. "You may well end up with an unwanted paid subscription, or even lose control of your account altogether." Image Credit: Nintendo Not content with playing Mario and Zelda on your Nintendo Switch? Want to get under the hood of your consoles? You're not alone - and developers Billy Laws and Max Keller have modded Nintendo's hybrid console in order to get it to run the Android OS. With the Switch basically an ARM-based tablet with two wireless controllers slotted into the sides, it in theory shouldn't be too tough a job to get Android running on it. After all, there are many Android mobile devices running on ARM chips.That's what the modding duo have managed, as you can see in the video below - and with some concessions, Android O will run on the Nintendo Switch.([®] 3[™]) #NintendoSwitch #Android pic.twitter.com/RfBn7VKStw23 February 2019See moreWhat's missing?With support being unofficial, there's some bugs and kinks to be ironed out, as you'd imagine.Though Bluetooth, Wi-Fi and the Joy-Con controllers work while running Android, there's no GPU support at the moment, making anything but the most graphically-basic of apps problematic to run.As for docking for big-screen view of the Android interface, there's no word yet on that working, but we'd assume that's the dream of those working on the mod. Considering the Nintendo Switch is quite light on media and productivity apps, Android support would fill those gaps nicely.Of course, tinkering with the Nintendo Switch OS in this manner invalidates your warranty, so if you've the urge to fiddle with your tablet, consider yourself warned.Should you buy a Nintendo Switch? Digital SLR cameras don't normally get more than a few hours of battery life unless you carry spare batteries or use a battery grip. With this DIY battery mod, you can get up to nine hours.DIY YouTube filmmaker Chris Winters takes a 10,000 mAh external battery with a 9V output, a DC coupler, a hotshoe mounting plate, and some velcro to keep his Canon T4i DSLR powered on for up to nine hours. Canon DSLRs have a small slot that allow the cable on a DC coupler to fit through the battery cover without a problem, but other DSLRs may not. Make sure to double check your camera before you get started. Click the source link for more details, including the list of recommended parts.Increase Your DSLR Camera Battery Life To 9 Hours! | Chris Winter via Make So a fat pig jumps into my cab, and then he busts out into song while I carve through city streets. Nope, this isn't some deleted scene from the end of Slumdog Millionaire. I'm playing Karma Cab-a goofball mod for Half-Life 2.What the heck is a mod? User-created game content-it's been around since long before YouTube ever made do-it-yourself entertainment a household concept. Old-school gaming nerds crafted game levels, weapons, character models-heck, entire games have been built using the guts of game engines for ages. (In fact, I highly recommend that you check out Mod DB for a huge selection of game mods.) That means lots of extra, free games derived from what you've already bought. The mod scene also happens to be a breeding ground for tomorrow's great game designers. To wit, the 2009 Independent Games Festival recently announced the ten student-showcase winners, some of which are based on mods. However, I wanted to showcase a couple of my own picks. I've found some really odd Half-Life 2 mods that, coincidentally, all came from the same academic program: the National Academy of Digital, Interactive Entertainment in Denmark (DADIU, in their native tongue).Want to play 'em? All you need is Half-Life 2 with Steam, plus the FRAPS video codec to see some of the intro videos (but I don't believe FRAPS is required). Okay, back to my cab ride...and the rest of the weirdness.The Game: Karma Cab The Gist: It's a Bollywood cab ride turned into a video game. In other words, it's a potential tandoori plate of awesome. The passenger makes comments in the back seat in a singsong fashion. He might say something as banal as "You look familiar..." or perhaps a slightly snarkier remark like "What's that smell?" As you're matching up scrolling shapes along the bottom, you're also deciding how you'll react: Take the comments in stride or be a complete jerk. I'll give you one guess what I did. (Download Karma Cab)While I think it's really smart that you never get to see the road as you drive, it might be a little cooler to see the cabbie careening down city streets. As for the music...well, I'm no big follower of the Indian movie scene, but the music here could be a lot catchier. Hey, no slight intended to the crew: You still have a fun game on your hands here-it could use just a little more spice. Eh? Get it? Oh, never mind.The Game: Dish Washington The Gist: A game where you do the dishes? Yeah, I know, sounds about as much fun as...well...doing the dishes, but Dish Washington was among the top nodworthy games for the 2009 IGF student projects. You're a funky, dishwashing dinosaur-thing. Your job is to grab crud from the top of the stack, hold it over the sink, and scrub away grime to the rhythm. Rubbing out grease to the music keeps the water hot, and you up to your green elbows in Palmolive. So I guess there's something good to come out of this, right? I mean, if I play this long enough, I'll forget about the Jenga-fied pile of pint glasses building up in my sink. Highly recommended for neat freaks who need to feel the beat. (Download Dish Washington)The Game: It's Mime Time! The Gist: Mimes, probably some of the most hated people on the planet. Now, with Mime Time, you're a member of their silent gang. What could've amounted to a really bad joke is actually a clever little game. The deal here is that you're trying to earn some bucks, impressing Parisians on their lunch break. You have 3 minutes to rack up cash by pulling off trademark moves. To do that, you navigate through an invisible maze and complete minigame challenges. (You know that whole walking-into-walls gag that mimes do? It's a big part in the game.) Me? I've always been a big fan of the ol' "trying to lift the invisible weight" gag. (Download It's Mimetime!)The Game: A Corny Voyage The Gist: Technically, you could call this a racing game. And, if you really want to spin it a certain way, it's also a quick lesson in human anatomy. Kind of. You're an undigested corn kernel trying to get out of a human body intact and as quickly as possible. As you might've guessed, a few-how shall I put this-obstacles get in your way. Hurtling through the intestines, you pick up speed, and the roadblocks are many. You can survive a couple close brushes; hit the sides one time too many, however, and you're in it, deep. Yeah, classy. You know what, though, if you convince yourself that you're flying through a cave and that...stuff...is...umm...space sludge, this would still be just a plain ol' fun game. But with big, brown barriers. (Download A Corny Voyage)(As a quick aside, last year's IGF awards had another one of the DADIU's games on display: Flipside. I strongly recommend you check that one out as well.)So what is it about Denmark students and their oddly creative collection of games? Is it something in the water? Kristine Ploug, a spokesperson for the DADIU, explains that the academic program selects only about 70 students a year coming from universities and art schools studying all aspects of computer game production. It's basically a supplement to their ongoing training from other universities.Since its inception in 2005, the program has provided hardware, software, and Valve's Source engine to students. Then the class splits into five or six teams. Each team consists of one game designer, one project manager, one game director (in the sense of a movie director), one audio designer, a number of visual designers, two modelers, two animators, and two or three programmers. Basically the groups form tiny game studios-a little more effective than your average internship-with extremely tiny deadlines. A game must be done within one month. No pressure or anything.And that's just one school, with a couple of promising productions. In the coming weeks, as the final IGF awards draw closer, I'm going to see what other original games I can dig up for you from places such as SMU's Guildhall, DigiPen, and the countless other groups on the academic scene. Until next time...Casual Friday columnist and PC World Senior Writer Darren Gladstone geeks out over gadgets, games, and odd uses for humdrum tech. In other words, he's a nerd-and he's okay with that. Need even more nerdity? Follow gizmogladstone on Twitter for more time-wasting tips.
