Please dont recommend getting a 650 if I want a case feeder, I am already considering that and have been discussing that in another thread.I do it this way because of the primerThis way I clean the primer system beforeI have used it for about 6 months. To answer you question it does work well. Is it perfect, no. Most of the time this happens, a case has a burr on the rim. The spent primer catch system is different from the original setup and it drops a few more on the floor.If you are looking for something you can bolt on and never touch again, dont buy it. But if you dont mind spending a little time with it to tweak it, and can accept a crushed case once in a while, go for it.I have used it for about 6 months. To answer you question it does work well. Is it perfect, no. Most of the time this happens, a case has a burr on the rim. The spent primer catch system is different from the original setup and it drops a few more on the floor.If you are looking for something you can bolt on and never touch again, dont buy it. But if you dont mind spending a little time with it to tweak it, and can accept a crushed case once in a while, go for it.I wonder if it works better on the 650 or if that one has occasional issues as well.

How much does it speed up your case output i.e. cases per hourIt is very much an afterthought, the design is kludgy, and as stated above be prepared to tinker with it quite a bit. Also as stated the shuttle is problematic at best so yes it is easy to crush cases This is why Dillons policy is pistol only, btw. It also effectively blocks off the entire right side of the 550, and practically takes an engineering degree to install and adjust lol. I found it akin to trying to connect a satellite dish to black and white tv. Also, If you have an older model 550 you may also require a different thickness platform, otherwise the press wont cycle completely. Dillon gave me a free replacement platform, but made it sound like they didnt have many of the modified platforms left and in the future a press frame upgrade would be required for older model presses, that is. Later Bs and of course Cs no issue. This was about a year ago so not sure of the status there. I also had minor clearance issues with the Dillon Roller Handle.It is very much an afterthought, the design is kludgy, and as stated above be prepared to tinker with it quite a bit. I load 9mm and .45ACP, and it has functioned almost flawlessly for me.Initially, a certain amount of

tweaking is needed to get everything aligned and secured with bolts. The shell plate and the primer system also must be clean because they are integral to the process of getting a case in place so that it can be resized and primed in Station 1. These are things that one does whether or not a case feeder is present. Trying to put too many cases in the bowl at one time can cause difficulty. I usually put 100 cases at a time, but I think putting 200 would not be unreasonable. Hope this information is helpful to you. Kindest regards. I wonder if it works better on the 650 or if that one has occasional issues as well. How much does it speed up your case output i.e. cases per hour? I had zero problems out of it. I timed myself once to see what kind of speed I could get out of it. I loaded over 900 rounds of .40 in one hour. That was with me looking inside every case to check for powder. I also had all of my primer tubes full before, so I did not have to stop for that. It may have sped me up 10% I don't shoot nearly the amount I used to, so I really just take my time. The 650 was designed from the outstart to use a case feeder, the 550 was not. I had a 550b and wanted to increase output. I thought about adding a case feeder to the 550b or selling it and buying a 650. I didn't want to deal with the hassle of selling the 550b so I bought the case feeder. I was loading 9mm, .40, and 38 special. I could never get it to run right. As others have said the case feeder on the 550b is an afterthought. I ended up selling the 550b, using the case feeder on my casepro, and buying a 650. The 550b is a great well balanced machine. Add a case feeder and it is unbalanced left hand does 2 things, right hand just runs handle. If you want a case feeder buy a 650. I have come to the conclusion that I am not getting a case feeder for the 550b.

I will most likely keep the 550 and get a 650 or sell the 550 and get a 650. Here is my set up. You really need a sturdy, solid bench with a case feeder more so than with just a standard reloading press, otherwise you run in to all sorts of feeding and collating issues. I have one of these QR plates routed into my workbench and can swap my 550, Forster, Trimmer, Vice, etc all in the same spot. They also offer it on a raised mount as well. The 1050 I run direct mounted since I use it much more often and don't expect to move it around much. You really need a sturdy, solid bench with a case feeder more so than with just a standard reloading press, otherwise you run in to all sorts of feeding and collating issues. I have one of these QR plates routed into my workbench and can swap my 550, Forster, Trimmer, Vice, etc all in the same spot. They also offer it on a raised mount as well. The 1050 I run direct mounted since I use it much more often and don't expect to move it around much. It is very much an afterthought, the design is kludgy, and as stated above be prepared to tinker with it quite a bit. Also as stated the shuttle is problematic at best so yes it is easy to crush cases. This is why Dillon's policy is pistol only, btw. It also effectively blocks off the entire right side of the 550, and practically takes an engineering degree to install and adjust lol. I found it akin to trying to connect a satellite dish to black and white tv. Also, if you have an older model 550 you may also require a different thickness platform, otherwise the press won't cycle completely. Dillon gave me a free replacement platform, but made it sound like they didn't have many of the modified platforms left and in the future a press frame upgrade would be required for older model presses, that is. Later Bs and of course Cs no issue. This was about a year ago so not sure of the status there. I also had minor clearance issues with the Dillon Roller Handle. Is that a 550 and a 650 or a 650 and a 1050.

I noticed one of your presses is all the way on the right end of the I was talking to Inline Fabrication. I was talking to Inline Fabrication. Yes, it will mostly feed cases. But really a pain and gets in the way. I owned and operated a cabinet shop with all kinds of machinery and more than a few other things, but the 550 case feeder beat me. If I could manage 400 rounds per hour without it, I couldn't quite achieve that rate with the feeder, counting in the time required for setup, tuning, fixing, retuning, clearing jams, and all the rest. The clock made the call for me. Yes, it will mostly feed cases. But

really a pain and gets in the way. I owned and operated a cabinet shop with all kinds of machinery and more than a few other things, but the 550 casefeeder beat me. If I could manage 400 rounds per hour without it, I couldn't quite achieve that rate with the feeder, counting in the time required for setup, tuning, fixing, retuning, clearing jams, and all the rest. The clock made the call for me. That's not enough to make it worthwhile IMO. Thanks for your post. You're on the right track. Only turned it on, and off. The difference in rigidity that causes is even higher than you'd expect. I was looking at one just like yours in Sears yesterday. Home Depot sells them too but are on back order. Bolting it to the wall is not an option for me. That's not enough to make it worthwhile IMO. Thanks for your post. The list the 550 at 400 per hour I believe. So you gain 80 per hour on the upside. On the downside caliber changes take more time. Loading for 2 hours everyday will make a wintery January roll by quickly. Then you change primer size and caliber for February. I was looking at one just like yours in Sears yesterday. Home Depot sells them too but are on back order. Bolting it to the wall is not an option for me. By itself it's a fairly heavy and sturdy bench. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL.

To use your Reward Points make sure you input the amount you wish to use from your total accumulated amount at the checkout process. Reward Points cannot be transferred to another user and expire in 12 months unless new points are accumulated prior to the 12 month expiration date in which case the 12 months period resets. The Reward Points are available to you for any future purchase on the DAA webshop. If you are looking for a case feeder I would not hesitate to purchase this. I tend to load in batches of 100 or 200. The feeder works as advertised. I had to sand inside of the support ring a bit to fit the adapter tube but that was easy. Takes about 10. It works great without having to buy an automatic case loader for which I do not have the room for. I also use a lee quad rotating case loader with collator. It would be nice to see DAA team develop this with a shaker collator on top I prefer over. I was so pleased after the first use, I immediately bought another feeder. During the loading session, when I'm using the one. Simple design, no motors, no noise, very economical alternative to motorized case feeder. I want a spare set of tubes! I fill the tubes when watching TV. Will order a spare tube soon. While not want a full size case feeder, I needed something to improve my process for loading 9mm. Enter the mini XL650 vase feeder, allowing me to have 150 cases preloaded and ready to go. Then I wondered could this product do even. Good! good! good! Still works fine. Coupler avec Mr Bullet Feeder gain de temps assurée. Une alternative à la distribution avec un case feeder. Easy to install on my XL650 Dillon. The first time I put out 300 rounds in no time. I plan on purchasing the mini bullet feeder just for my 9mm rounds. Just not sure about being able to check the amount of powder that dropped. I highly recommend this product. I. Impossible to be not happy about this solution. Speed increase a lot reloading very fast!

Each time a tube empties out, click the next one into position and continue reloading. If too tight, it may be difficult to remove to clear jams. If too loose, the assembly may wobble or cant a little. There is a slight variance between the various Dillon Casefeed Adaptor tubes, so some light fitting may be needed for a fit perfect to your needs. You can use a file, sandpaper or dremmel to slightly increase the inner dimension of the SupportRing part. If you are looking for a case feeder I would not hesitate to purchase this. So simple and I can't believe it's at this price point!!! I tend to load in batches of 100 or 200. The feeder works as advertised. I had to sand inside of the support ring a bit to fit the adapter tube but that was easy. Takes about 10 minutes to load a tube with 100 cases. Overall, I am extremely pleased with the Mini Case Feeder and the extra Tube Assembly. If I really want a high output reloading session, I can fill both up with 150 cases a piece and go to town. I don't regret not spending the money on Dillons Case Feeder at all. I would like to see a collator of some sort. I know they are not perfect, but there are hacks out there that work 99% of the time and I can handle the 1%. Just sayin. It works great without having to buy an automatic case loader for which I do not have the room for. I also use a lee quad rotating case loader with collator. It would be nice to see DAA team develop this with a shaker collator on top I prefer over filling the tubes any day. A must have

for us automated people. I have the Dillon automatic case feeder on my 650XL its just so noisy. I picked up a few to keep each caliber set up complete. I wasn't expecting it to work as well as it did to tell you the truth. I was so pleased after the first use, I immediately bought another feeder. During the loading session, when i'm using the one feeder, I have my son filling the other. You can load 500 rounds in no time.

I did have to sand down the adapter a bit to get it to fit onto my press, but besides that, the installation was simple. I am pleased with DAA products, and I would recommend them to anyone with a Dillon loading machine. Simple design, no motors, no noise, very economical alternative to motorized case feeder. I want a spare set of tubes! I fill the tubes when watching TV. Will order a spare tube soon. While not want a full size case feeder, I needed something to improve my process for loading 9mm. Enter the mini XL650 vase feeder, allowing me to have 150 cases preloaded and ready to go. Then I wondered could this product do even more then its initial design. Great job in designing an excellent and modifiable product to meet varying needs of reloaders everywhere. Good! good! good! Still works fine. Coupler avec Mr Bullet Feeder gain de temps assurer. Une altemative a la distribution avec un case feeder. Easy to install on my XL650 Dillon. The first time I put out 300 rounds in no time. I plan on purchasing the mini bullet feeder just for my 9mm rounds. Just not sure about being able to check the amount of powder that dropped. I highly recommend this product. I also purchased the spare tube. Now if only DAA would somehow increase the amount of primers in the Dillon. Great Job, great company. Impossible to be not happy about this solution. Speed increase a lot reloading very fast. We supply optical equipment including, binoculars, telescopes, rangefinders, night vision and riflescopes and related accessories. Please note prices and configuration can change without notice. Finding the best OAL is the quickest and cheapest accuracy improvement for your handloads. Super bright,, out of the way, no heat and does the job perfectly. Average lifespan is 75,000 hours. Caliber changes are quick and easy, just pick it up, swap your toolhead, drop it back in and get back to work. Warrior Knitter has uploaded 812 photos to Flickr.

You simply dump a quart of cases into the hopper and turn it on. The motordriven disc fills the case feed tube, a microswitch shuts off the motor when the tube is full, and automatically restarts it when low. This case feeder only works for the handgun calibers listed under the casefeed caliber conversions. Rifle cases are too tall to feed with this system. Cost of the casefeed caliber conversion is separate from the 550 casefeed system, and is added to the total in the shopping cart. Be the first to review this product! The interchangeable toolhead makes it quick, easy and inexpensive to change calibers. For example, if you load 3006 for elk,.243 for deer and.22250 for coyote, you dont even have to change the shellplate. You simply pull two pins and swap the toolhead with your 3006 dies to another toolhead with your.22250 or.243 dies in less than 30 seconds. The additional toolheads are inexpensive if you load for several rifles its a no brainer. Once you get your dies set youll never have to reset them. A powder measure adapter is available if you want to use a manual measure that you already own.

Optional Extras Available Instructional DVD, Roller Handle Plastic or Alloy, Strong Mount, Bullet Tray, Empty Case Bin, Low Powder Alarm, Extra Small Powder Bar, Magnum Powder Bar, Belted Magnum Powder System, Extra Primer Pick Up Tubes, Machine Cover, Other Conversion Kits, Extra

Toolheads, Powder Die, Case Feed Kit, Electric Case Feeder. NOTE Calibre conversion must be fitted by customer. Dillon has included instructions how to do this. Straight forward and easy to do. Cast iron construction and dual guide rods ensure consistent results. Free floating design allows the die and shellplate to move on two axis, so the case is always perfectly centered in the die, minimizing bullet runout. Generous frame opening and ram stroke accommodate even the largest magnum cases. Three included die blocks more available separately let you change dies with ease, quickly changing from resizing to seating or crimping operations in seconds. Each die block features a lock screw to ensure the die returns to the proper setting each time. Spent primer collection system ensures your workspace stays clean. Press also features an integrated LED light to make it easy to see what you are doing. Ever since, the folks at Dillon lists 32 differentIt worked just great. TheThere is anIt kept the cases ready to load, andI ran severalTo load these, the lowerIf a person loads mostlyIt will save time and operatorIdeally, I wouldI will most likely buyThe case hopper and related hardware is notIt adds speedWant to agree or.
