True bypassThe modern 9V DC power supply input make the This pedal is similar to our Analog Man modified previous version DOD 250 and 308 but it is not a handwired pedal, more a factory made pedal so if it breaks it wont be as easy to fix as the previous version. I always loved the tone, but hated how I had to power them and how noisy they are. Well, those days are over. I sent a standard, yellow reissue to Mike and had him put the 741 chip in it, turn it into truebypass, Bossstyle power connection and an LED to boot. This is now, by far, my favorite drive pedal. Its such a thing of beauty. Warm, rich tone. Ive had friends comment on how this thing sounds.wondering what in the hell sounds so good on that little pedal board of mine. Thanks again Mike! Youre an asset to the music community for sure. Was this review helpful to you. If you can find one eBay, Reverb, etc you can send it in for the mods DOD mod form Optional LED, power jack, and true bypass. They are available the basic vintage DODOD250 mod, the MOJO 741 correct chip mod, plus options for true bypass and LED. We also sell that one on a different page than this but no mods on that one as its not hand made. At the bottom is the normal new reissue DOD pedal. On the top right is an old 1980 DOD pedal with the original, smaller knobs. At the top left is a new pedal with the small knobs that we added. Germanium is smoother and darker but has less volume. The middle NO CLIPPING position is louder and more open sounding. No need to get the MXR option with this option, as it gives you the MXR sound. Comparisons to get unity gain volume with single coil pickups into a clean amp Clean boost, gain at zero MXR level 300, still some distortion even with gain at zero. DOD level 1200, no distortion, can get a decent clean boost up all the way none about the same as DOD. Probably cleaner than DOD with humbuckers.

You can use it to boost your signal and you can fade the distortion in from clean to complete chaos. Unlike other distortion pedals, when the gain is all the way off you can still hear the signal.Its the original vinatge model from the early 80s. The potentiometers were made around November 1980, so this pedal is more than likely from 1981. The main opamp chip is a Texas Instruments TL081 made in Malaysia. It does have a couple of modifications. First, a bright blue LED has been added to indicate whether or not the pedal is engaged.

Also, the original switch has been replaced with a 3PDT switch to provide truebypass and to switch the LED on and off. Does not include box or manual. Pedal only. Concentrating on. The 2013 version captures all the original's signature tone and wild heart, without taming its performance. The DOD 250 boasts a smooth distortion that is fundamental for that midseventies guitar sound. Whether you are looking for an overdrive to boost your amp's natural sustain or a mellow, tubesounding distortion, the DOD 250 has it. Just crank up the gain for intense distortion with a lush, full sound. The new 2013 version of the legendary DOD 250 captures all of the classic tone and wild heart of the original but in no way tames its performance.

Level dials in some subtle body for "always on" performance or huge amounts of boost for boosting solos above a dense stage mix. The modern 9V DC power supply input make the pedal more pedal board friendly. It has a twoposition cab sim toggle that lets you engage a large driver speaker box model and more gain than vintage tubepowered stompboxes for that classic Texas Floodstyle dirty and gritty sound. The Big Joe B402 Classic Tube has a midrange sweet spot that lets your tone tear through the mix and features true bypass switching for quickly clearing up your signal. Boasting Smooth and Fat switches, the BigRock Pro can get every familiar tone from FatRock and TightRock

pedals. What makes the BigRock Pro stand out among many distortion pedals with boost is its two Boost knobs, one after and one before the distortion, making it convenient to boost the volume and gain for a majestic solo tone. The Behringer TO800 Vintage TubeSound Overdrive is here to the rescue. Featuring original 4558 dual opamps and MA150 distortion diodes for that authentic vintage screaming tube sound and dedicated Drive, Tone, and Level controls for getting the exact sound you're looking for, the TO800 gives you all the smooth sustain and fat tone you need minus the bankbreaking price tag. Unlike the TM, however, Mosky put all of the control knobs on the face of the MM. You get easy access to dedicated Gain, Volume, Bass, and Treble control dials without having to open the MM's enclosure. Tonewise, the MM Silver serves up a transparent overdrive that doesn't overwhelm your core tone. Its Balance knob lets you mix the exact amount of overdriven sound you want with your natural bass sound for extra clarity and punch. Best of all, the BOD400 is specially designed for bass guitars, so there's no danger of your tone's bottom end dropping out when you turn it on—even if you have a five or sixstring bass. Normal 0 21 false false false TR XNONE XNONE By the end of the decade Maxon had taken the world of compact effects by storm, and in Japan their products were considered the standard by which all others were judged. It was during this time1977. With considerably less gain than the OD808, the OD880 was the perfect companion for the player who wanted the absolute minimum tonal coloration from their overdrive box. The OD880 was perfect for use as a transparent booster to take a tubeamp over the edge, offering singing blues tones unrivaled by other stomptboxes. In the early 1990's Maxon reissued a limited edition version of the OD880 in the original large enclosure with the addition of a status LED. However. With no distribution outside of Japan, this model went largely unnoticed by the rest of the world, leaving its amazing tubetone a secret to everyone save a few select vintage enthusiasts.

Now Maxon has once again resurrected the OD880 and improved on this timeless classic.

Industry standard 9 Series chassis.
