See how to enable scripts Skip to main content Microsoft Download Center Download Center As always, all updates will still be available via WSUS, SCCM, and. Not anymore Microsoft now offers a "Windows 7 SP1 Convenience Rollup" that essentially functions as Windows 7 Service Pack 2. With a single download, you can install the hundreds of updates at once. But there's a catch. If you're installing a Windows 7 system from scratch, you'll need to go out of your way to download and install it. If you're installing Windows 7 from scratch, you can get this in one of two ways These ISO images have Service Pack 1 integrated, so you'll already have Service Pack 1 after installing from them. Launch Windows Update, check for updates, and install the "Service Pack for Microsoft Windows KB976932" update to install it. You can also download Service Pack 1 directly from Microsoft and install it without going through Windows Update. If it says "Service Pack 1" in the window, you have Service Pack 1. If it doesn't, you need to install Service Pack 1. Don't ask us why; ask Microsoft. Click the appropriate link to download the update for either an x86 32bit or x64 64bit version of Windows 7. Microsoft could change them at any time, so send us a note if these links appear dead. If the direct download links work, you can skip downloading the update from the Microsoft Update Catalog website. Just download the appropriate update and run it to install it. For example, you could select your Downloads folder or Desktop. Depending on the update you selected, the download is between 300MB and 500MB in total. Future updates won't be added to it. If you're downloading this package after that date, you'll need to install the Convenience Rollup, then launch Windows Update to install any updates released after this package. It will also offer smaller updates for security problems, as usual. This should result in less updates to install after you've installed the large Convenience Rollup package. <http://www.bleha.eu/KUBA/bleha/userfiles/comand-navigation-manual.xml>

You can also think about manually installing Windows updates in segments of the network isolated from the Internet when testing updates on computers if you are not using a WSUS server, where you can manage approving of Windows updates manually and in some other cases. In this article we'll show you how to manually find, download and install a latest cumulative security update for your Windows 10 build. New updates are released every second Tuesday of the month. Also note that about 2 years ago Microsoft switched to a cumulative model of Windows updates. It means that to update your operation system it is enough to install a single cumulative Windows update package, the latest one. Use the following PowerShell command Windows 10 Pro 1909 10.0.18362.628 64bit You can find almost any update for all supported Windows versions the direct

import of updates through the WSUS console is also supported. The main problem is that there is no effective search system in the update catalog, so if you do not know the number of the KB you need to install, it is quite difficult to find and download the right update msu package. This article was written on April 24, 2020, so the latest security updates were released last week.<http://www.newgo.ru/media/comand-ntg2-manual.xml>

In our case, to search for the security updates for Windows 10 1909 x64 as of April 2020, copy the following search query and paste it into the search field in the right upper corner. Of course, you can download and install all of them, but you can also save your time. Since Microsoft started using cumulative updates, just download and install the latest cumulative update for your OS version. In the next window with update info, go to the Package Details tab. In this tab, you can see, which updates are replaced by this one. This update replaces the following updates and which update it replaces in turn. This update has been replaced by the following updates. The screenshot shows that update KB4549951 is replaced by KB4550945. It means that it is the latest cumulative security update for your Windows 10 build. Download the file and save it on your local drive. The first entry refers to a knowledge base KB article with the latest cumulative update for the selected Windows version. In our example, it is April 21, 2020—KB4550945 OS Builds 18362.815 and 18363.815. It is the update we have downloaded using the first method. To do it, double click the MSU file and follow the prompts of the Windows Update Standalone Installer. Search for it in the Microsoft Update Catalog using the query servicing stack windows 10 1909 x64. The following command will install the specified update in the silent mode and postpone the automatic reboot of the computer after the installation is completed. Please try again shortly. Windows 7 KB4534310 is apparently the final update for the OS and KB4534314 is the last security-only update. Windows 7 Home and Pro users shouldn't expect any updates or critical patches from Microsoft after January 14. As always, you can download Windows 7 KB4534310 offline installers and manually update the PCs. According to the changelog, Microsoft has resolved issues with various core components of the OS including Windows Storage and Filesystems, Windows Input and Composition, Microsoft Scripting Engine, and Windows Server. Windows 7's Servicing Stack Update KB4536952 is also available for download. If you don't want to install Windows 10, you should not use Windows 7 machine to connect to the internet and browse the web or address sensitive data such as payment gateway or emails. Starting January 15, Microsoft will be a bit more aggressive and fullscreen warning messages will pop up on your Windows 7 device. Unlike the aggressive marketing push in 2015, the latest notification will be temporary and users can easily dismiss it. Or you can also purchase a new desktop, laptop or 2-in-1 device from Microsoft and its partners. Here's how to install individual updates from it. Now Windows makes sure all important updates install in the background, so you probably don't need to intervene aside from an occasional manual check for updates.

It's called the Microsoft Update Catalog, and it's free to use if you need it. Let's take a look. You can search it to find all kinds of updates for Windows 10 and older versions manually. ActiveX is Internet Explorer's system for plugins, infamous for its security problems. However, Microsoft announced in October 2016 that the service now works in all browsers thanks to the removal of ActiveX from the site. The simple blue background and globe icon definitely match the era, as it hasn't seen a refresh in at least a decade. Initially, Windows Update worked as a web app that you visited to download and install new updates. Later, Windows started including automatic checks for updates so you didn't have to do this. You could choose Express to get only important updates, or Custom to see optional updates too. The site then let you pick and choose what updates to install to your PC. But you might wonder why it exists when you can just click Check for updates in the Settings app. It includes tools that system admins can use to deploy updates in a Windows domain corporate environment. Let's look at how domains work and why they're so useful. They might decide to pick and choose what updates to install on mission-critical systems. Or they may have to roll back a glitchy update and manually reinstall just that patch later. Advanced home users can still use the Update Catalog to install individual updates when needed. Or maybe you want to install an update on an older machine that doesn't have access to the internet. In both of these cases, downloading from the Windows Update Catalog is a solution. It once offered individual downloads on the main Microsoft website but has discontinued this in favor of keeping everything in one place. You'll still find some older updates there, though. Use the search bar at the top right of the screen. You can search for general terms like Windows Vista or Security here, but those will likely bring up thousands of results.

Every Windows Update has a number associated with it, such as KB4346087. Searching for this will bring up far fewer results. This will show the last modification date, size of the update, and more. On the Package Details tab, you can see which updates it replaces. However, this only worked in Internet Explorer in our testing. Know if you're on 64-bit or 32-bit Windows; remember that x64 updates are for 64-bit systems and x86 is for 32-bit. Some patches with identical numbers are available for more than one Windows version. And for Windows 10, you must make sure that your version number matches the one in the update. This will spawn a new window with a link to download the update. Just click this text and choose a place to save it on your PC as you normally

would. Doubleclick one to open it, then follow the prompts to install it on your system. Check out the best file extraction software if you dont have a tool like this installed yet. Rightclick the Start Button and choose Device Manager to open it, then find the driver you want to update and doubleclick it. Now that you know how to find and install updates from it, do you really need it There's no reason to go looking around for updates in normal cases, as Windows Update does the work of finding what you need and delivering it to you. Just make sure you install the right update for your machine. Have a look at our Windows Update troubleshooting guide for help. He left his IT job to write fulltime in 2016 and has never looked back. Web apps including those built on EdgeHTML, and Microsoft Edge preview channels such as Dev or Canary will continue to work without interruption. We will start to migrate Windows 10 customers to the new Microsoft Edge in the coming weeks, starting with a subset of Windows Insiders in the Release Preview ring. Contact your administrator for more information on updating to the new Microsoft Edge in your organization. Administrators should refer to the “Enterprise updates and options” section below. You can always preview the next major update via the Beta channel—for example, Microsoft Edge 80 will enter the Beta channel soon, and is expected to release to Stable in February. You can learn more about Microsoft Edge preview channels in our previous blog post, [What to expect in the new Microsoft Edge Insider channels](#). Managed devices will not be automatically updated to the new Microsoft Edge. In addition to managed devices, Enterprise, Education, and Workstation Pro Edition devices will not be automatically updated at this time. Organizations that would like to block the automatic delivery of the new Microsoft Edge to devices on Home and Pro Editions with Windows Update enabled can do so either via policies or by downloading and deploying the Blocker Toolkit. Note that Internet Explorer is not impacted by our automatic rollout. Eligible Microsoft 365 customers can also take advantage of Fast Track and App Assure support, launching in Q1 of 2020. In the future, we plan to include Microsoft Edge built-in to Windows, to be delivered through a future Windows 10 Feature Update for all customers. We’ve seen exciting momentum in the Chromium project over the last year, landing more than 1900 contributions across areas like accessibility, modern input including touch, speech, digital inking, and many more, and we couldn’t be more excited for what’s next.

The updates can solve specific problems with Windows, provide protection from malicious attacks, or even add new features. While you could certainly download updates manually from Microsoft’s servers, updating via Windows Update is considerably easier to do. While Windows updates used to be installed by visiting the Windows Update website, newer versions of Windows include a special built-in Windows Update feature with more options. You’ll need to know which version of Windows you have to make sure you’re following the correct steps for your computer. Installation sometimes happens automatically or it might need to be done by you via the Install updates button, depending on what version of Windows you’re using and how you have Windows Update configured. Any updates available via Windows 7’s Windows Update utility are ones that have not been installed since support ended on January 24, 2020. Any updates available via Windows Vista’s Windows Update utility are ones that have not been installed since support ended on April 11, 2017. While there might be Windows updates available for your Windows XP computer on the Windows Update website, any you see will be updates released prior to the end of support date for Windows XP, which was on April 8, 2014. As mentioned above, updates to Windows can also be downloaded individually from Microsoft Download Center and then installed manually. Those tools are usually built specifically for updating non-Microsoft programs but some include a feature for downloading Windows updates. Please also read our [Privacy Notice](#) and [Terms of Use](#), which became effective December 20, 2019. While the final updates looked pretty routine, Microsoft has now revealed that one is causing wallpaper issues for some Windows 7 users.

“After installing KB4534310, your desktop wallpaper might display as black when set to Stretch,” admits Microsoft. It seems to only be affecting stretched wallpapers, and fit, fill, tile, or center options are still working for Windows 7 users. Bizarrely, this means Microsoft has to extend its Windows 7 support to fix a bug it has introduced. However, Microsoft has issued public patches for Windows XP in the past, to help prevent ransomware attacks. However, it’s likely that ESU program

participants couldn't get to them because of Microsoft's late-breaking ESU requirements change to install the Licensing Preparation Package updates. Organizations can renew the patch support at double the cost of the preceding year for up to three years in total. Microsoft characterizes this program as a last-ditch effort for organizations that are having difficulties upgrading their machines. However, the requirements have changed since the program was first kicked off in April for volume licensing customers and in December for other licensees. In late January, Microsoft recapped the ESU requirements, but included apparently new stipulations about having a certain SHA2 update installed, as well as October monthly rollup patches. What a surprise! Microsoft lists them by KB article numbers as follows. Those guidelines have been rewritten and now can be found in this Feb. 11 blog post. Instead, they can only get those files through the Windows Server Update Services console or by downloading them from the Microsoft Update Catalog. Wait while the program downloads and installs Windows updates. This one has a few more options than what you'll find in OUTDATEfighter, but you don't have to use them. Finding updates and applying them is still really easy and straightforward. Open the ZIP file and extract the two files from inside. Wait for Windows Update MiniTool to find all the available updates. If you hover your mouse over an item, you can see its description, which might help you determine whether you need it. Be sure to select the download arrow that has a line below it; the other one the second from the left is for downloading the updates only, not installing them. Windows Update MiniTool will autoscan your computer again after updating to show any other updates you need. Instead of scanning your computer for any necessary updates, you can browse Microsoft Update Catalog to manually download Windows updates. To use it, just search for the update you need and then download and install it yourself. Search for the file you want to download. Select Download next to the right item.
