## CONCEPTO DE HERNIA

- Protrusión de cualquier estructura anatómica por un orificio anatómico o adquirido, o un debilitamiento de la pared músculo-aponeurótica, el cual hay desplazamiento de su sitio habitual.

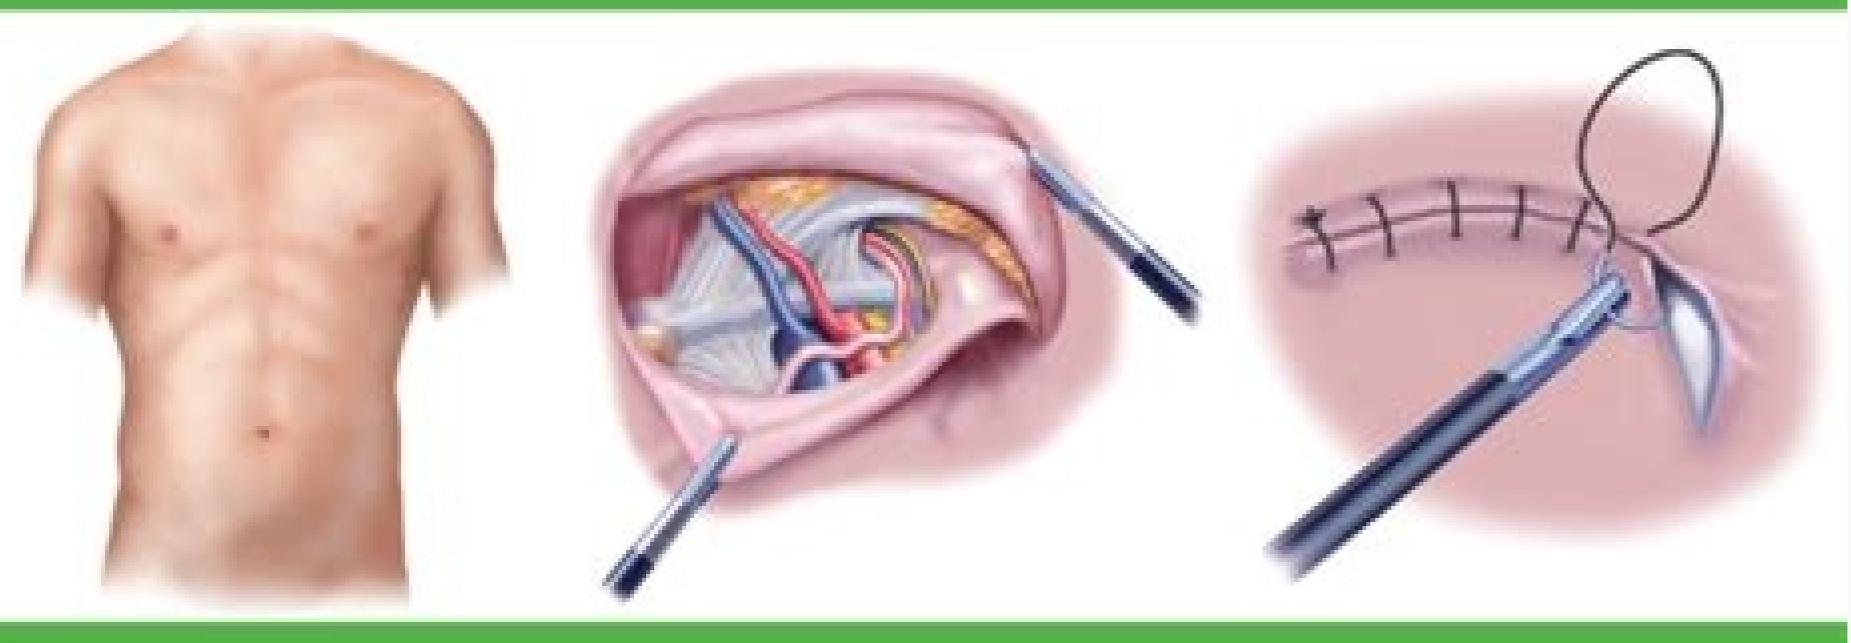

## Surgical Anatomy

- **Superficial Inguinal Ring:** It is triangular aperture in the aponeurosis of the external oblique muscle and lie 1.25 cm above the pubic tubercle. Normally the ring will not admit the tip of little finger.
- **Deep Inguinal Ring:** It is U shape condensation of transversalis fascia and it lies 1.25 cm above inguinal (Poupart's) ligament.
- The transversalis fascia is the fascial envelope of abdomen and competency of deep inguinal ring depends on the integrity of this fascia.

- Angka keberhasilan terapi operasi  
97% – 99%
- Penyulit residif : 1-3 %

## TÉCNICA DE BASSINI

- Extracción del saco lo mas afuera posible
- Reducción de diámetro del orificio inguinal.
- Aproximación del tendón conjunto al ligamento inguinal.
- Hernias inguinales indirectas y pequeñas hernias inguinales directas.
